EMMANUEL L. MOÏSE
SUPERVISORY PATENT EXAMINER

DETAILED ACTION

1. Claims 1-35 and 37 are pending.
2. Amendment filed 10/05/2006 has been received and considered.

Claim Rejections - 35 USC § 112

3. The claim rejections under 35 USC 112 have been withdrawn based on the filed amendment.

Allowable Subject Matter

4. Claims 1-35 and 37 are allowed.
5. The following is an examiner's statement of reasons for allowance: The prior art teaches the use of a module located in the central zone of optical disks for the storage of encryption data (i.e. keys and algorithms) for exchange with the disk reader that performs the decryption of the encrypted data on the optical disk. The prior art fails to teach a module on an optical disk that decrypts all of the data on the disk before sending the decrypted data to the reader. Since the decryption step is being performed in the module on the optical disk in each of the independent claims all of the pending claims are allowed.

Art Unit: 2137

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. O'Connor (US 5790489) teaches the use of a cryptographic processor on a disk for the prevention of copying the encrypted information on the disk; Barrett (US 6042009) teaches a disk (not optical) which has a processor in it to protect the data stored there within; Asakura (US 5119353) teaches an optical disk with memory in the central region storing encryption information; Lovett (US 5652838) teaches an optical disk with a microprocessor located in the central region; and Kulinets (US 6005940) teaches an optical disk with a processor located within its central region which performs encryption for methods of key generation.
